This concept map describes how information and communication flows into and out of a typical operating room. Circulating nurses are the ones primarily responsible for communication with hospital systems and outside personnel, as well as controlling the displays inside the operating room. EPIC acts as the central hub of all hospital data systems. By accessing EPIC, the circulating nurse's station and surgeon's station are conduits for the bulk of information flowing in and out of the OR.

Legend
- **Realt of surgical team**
- **Realt of anesthesiology**
- **Realt of circulating nurse**
- **Outside departments**
- **Information systems & modules**
- **Epic reports & data**
